**POUND RIDGE PARTNERSHIP**

**Join our journey to make Harvest Festival more sustainable.**

In alignment with its past funding of eco-conscious business district projects:

- refuse/recycling bins
- dual-volt EV car charging station
- energy-efficient lighting
- pet-friendly water fountain/bottle filler

Pound Ridge Partnership launched a food waste pilot program at its Food Truck Friday series this year to lessen the event's environmental footprint. Now it's time to take what has been learned and scale the effort for Harvest Festival.

#### WHY REDUCE FOOD WASTE AT HF?

- It helps curb emissions of greenhouse gases which accelerate climate change.
- Inspire attendees and normalize the diversion of organic materials from landfills by composting on-site and at home.

#### THE PLAN

- Promote educational home composting demos by the Town's Conservation Board.
- Set up multiple staffed waste stations which include bins for composting and recycling.
- Provide trained personnel to support volunteer Waste Warriors in sorting food waste and recycling.
- Utilize compost disposal/hauling services.
- Reduce the amount of single-use plastic in collaboration with our vendors.
- Set up multiple manned waste stations which include bins for composting and recycling.

This new commitment to mitigate food waste is complimented by previous Harvest Festival recycling efforts:

- Reducing single-use plastic water bottles by providing pre-packaged beverages in aluminum cans.
- Partnering with MeCycle as our aluminum waste partner.
